## **1. PRODUCT DESCRIPTION**

---

Model CS8550i-51 is an integrated type B/W CCD camera with a VGA format all-pixel-data readout CCD. The model is suited for high-speed, high-resolution image processing use. Its compact, light-weight body is ideal for system integration.

## **2. FEATURES**

---

(1) All pixel's data readout

With its built-in all-pixel-data-readout CCD, this model can read out image-data just in approximately 1/30 sec. A frame-shutter reads out all data even under RTS (Random Trigger Shutter) mode.

(2) High vertical resolution

As all pixel's data are read out even under RTS mode (in 1/30 sec.), images with no deterioration in vertical resolution are obtained.

(3) Square grid pattern CCD

Pixel's in CCD are aligned in square grid pattern. This makes it easier to perform computation correctly for image processing use.

(4) External Sync.

The camera is switched over to external synchronization operation automatically when external HD signal is input.

(5) Random trigger shutter function

With a built-in RTS, the camera's CCD starts light-exposure in synchronization with external trigger signals. This function enables the camera to capture fast-moving subjects at constant position for precise image processing.

(6) Restart / Reset

Under the restart / reset mode, this model can capture images at an arbitrary timing cued by external VD signal.

(7) Multiple shutter

With this shutter, this model capture images at an arbitrary timing cued by external trigger signal, and then outputs video at an arbitrary timing cued by external VD signal.

(8) Partial-scan

Under the partial scan mode, only 1/2 or 1/4 screen center portion of image information is read out, resulting in a faster operation.

(9) Ultra-compact & light-weight camera head

The model features its ultra-compact and light-weight camera head, freeing you from your integration-space-problem. In addition, it has an excellent shock and vibration resistance.

### 5. OPERATION MODE

---

- (1) GAIN selection (Camera rear-panel SW)

Switches sensitivity setting

(1-1) FIX ----- Factory-prefixed gain

(1-2) MANU ----- Gain is adjustable via the manual gain potentiometer (M.GAIN)

- (2) Video output mode selection (Camera rear-panel DIP SW)

Switches video format

(2-1) 1/30: 1/30s ----- Non-interlace mode

As all pixels are read out in 1/30s, you will get images with the higher V resolution.

(2-2) 1/60: 1/60s ----- 2:1 interlace MIX mode

As vertical pixels are added in readout, the sensitivity is same as that of 1/30s non-interlace mode during electronic shutter OFF. Twice greater sensitivity is obtained under shutter-speed range of 1/100 – 1/10000.

- (3) TRIG selection (Camera rear-panel DIP SW)

Switches TRIG input signal polarity used under RTS mode

(3-1) POSI ----- Positive polarity (rising edge detection)

(3-2) NEGA ----- Negative polarity (falling edge detection)

- (4) RTS (Random Trigger Shutter) exposure selection (Camera rear-panel DIP SW)

Switches light exposure mode under RTS mode

(4-1) FIX mode ----- Rear DIP SW

Exposure-time control via rear-panel DIP switch

(4-2) PULSE W mode ---- TRIG signal pulse width control

Exposure-time control via TRIG signal pulse width

(5) Shutter mode selection (Camera rear-panel DIP SW or TRIG signal IN [Automatic])

Switches shutter mode

(5-1) NOR mode ----- Normal electronic shutter

Exposure control via internal sync signal

High-speed shutter: From 1/10,000s through OFF (8 position)

(5-2) RTS mode ----- Random trigger shutter

Exposure control via ext. trigger or ext. sync input

Timing charts are shown below. (TRIG timing: Positive)

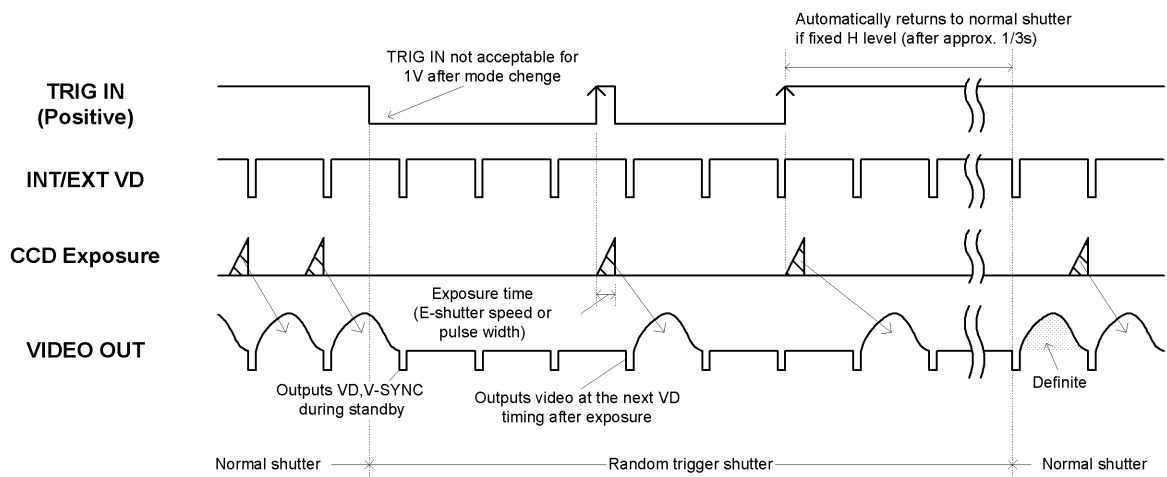

Notes: \* RTS selection is automatic with TRIG status

\*\* Neither under FIX nor PULSE W mode, RTS doesn't work if Electronic shutter speed SW is set in OFF position.

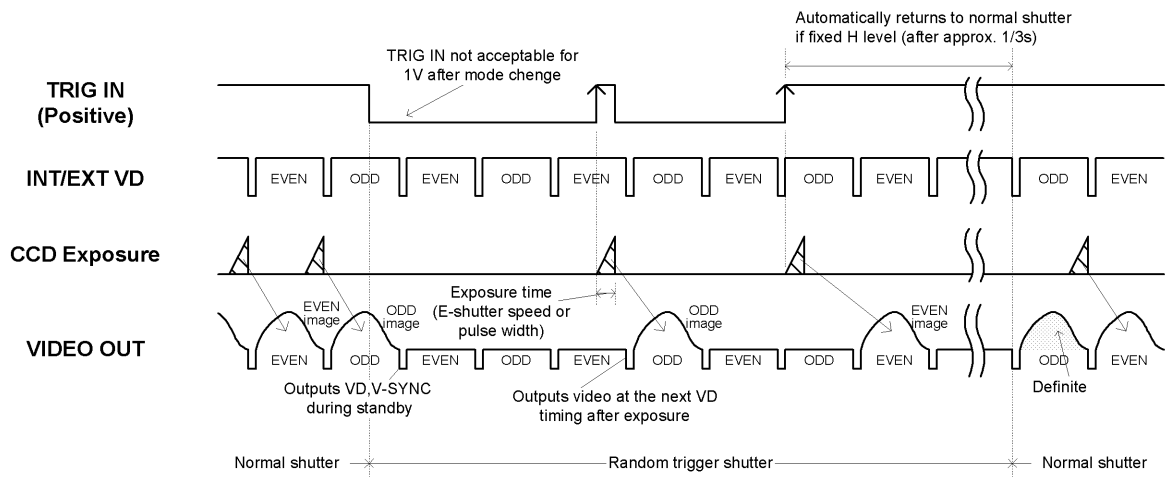

(a) Non-reset mode (Under internal sync / external sync --- Consecutive VD IN)

Exposure starts at the timing of TRIG signal IN. After each exposure is completed, the camera outputs video at each next VD IN timing.

1/30s Non-interlace

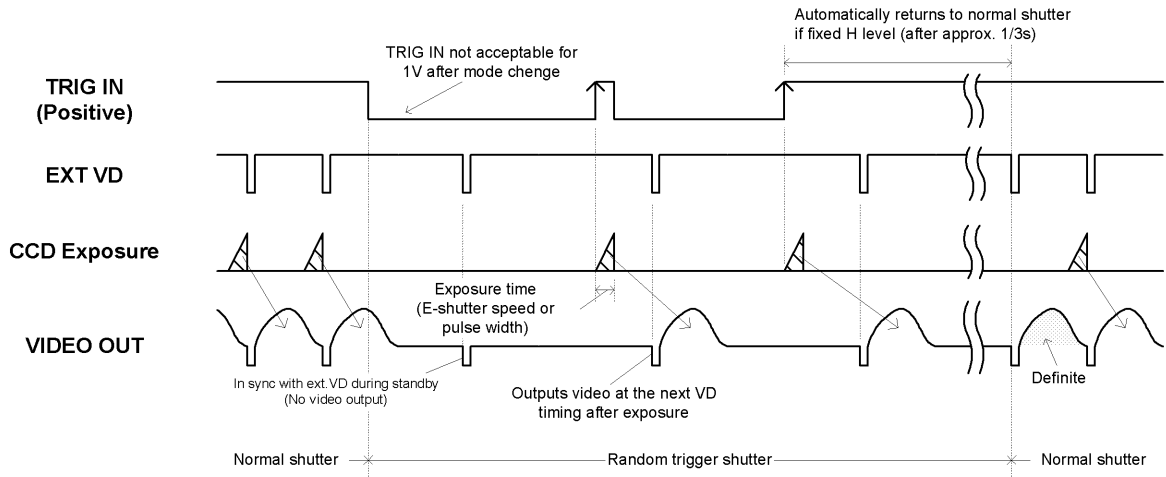

1/60s 2:1 Interlace

(b) Non-reset mode (Under external sync --- Single VD IN)

After TRIG IN and exposure, the camera goes into standby until next ext. VD IN.

□ 1/30s Non-interlace

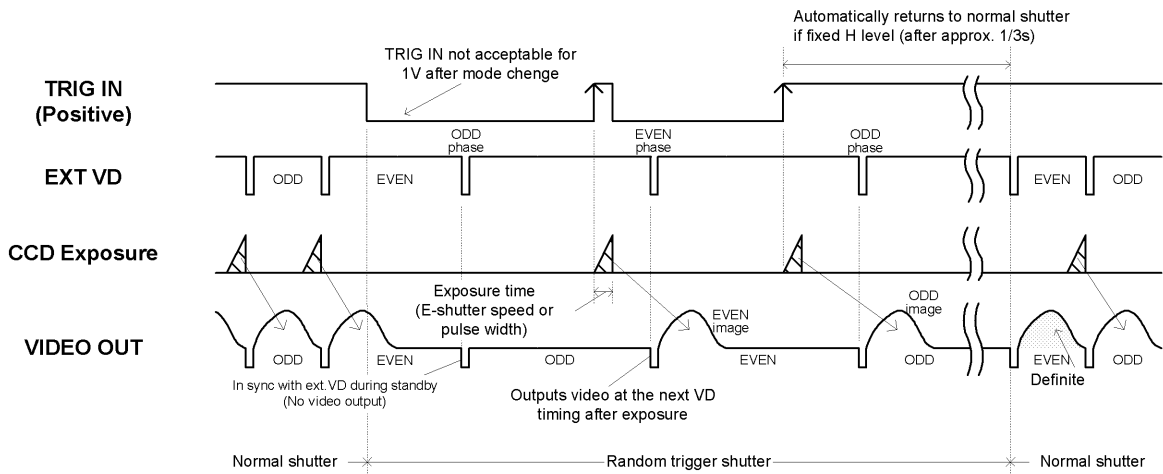

\*Don't provide ext. VD IN during exposure.

\*\* After automatic return, fix ext. VD IN at Hi.

□ 1/60s 2:1 Interlace

Video output field (ODD/EVEN) is determined by ext. VD falling edge and ext. HD phase.

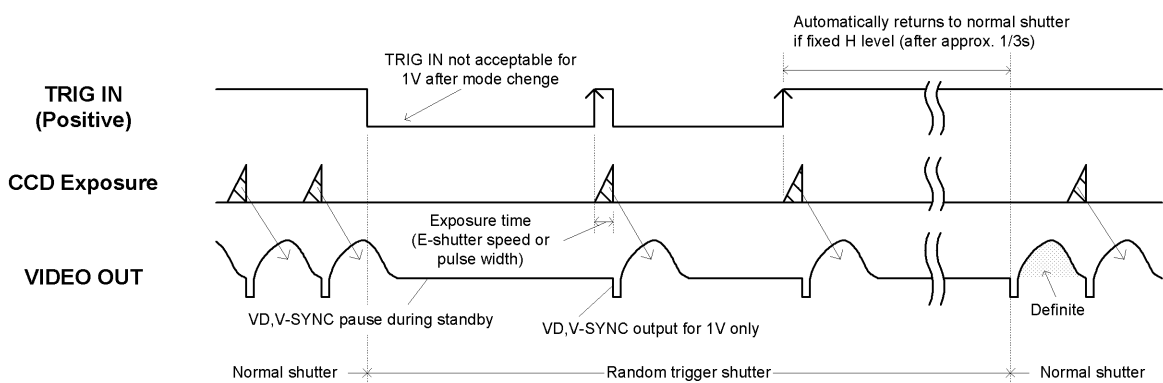

\*Don't provide ext. VD IN during exposure.

\*\* After automatic return, fix ext. VD IN at Hi.

(c) V-reset mode (Under internal sync / external sync --- No VD IN)

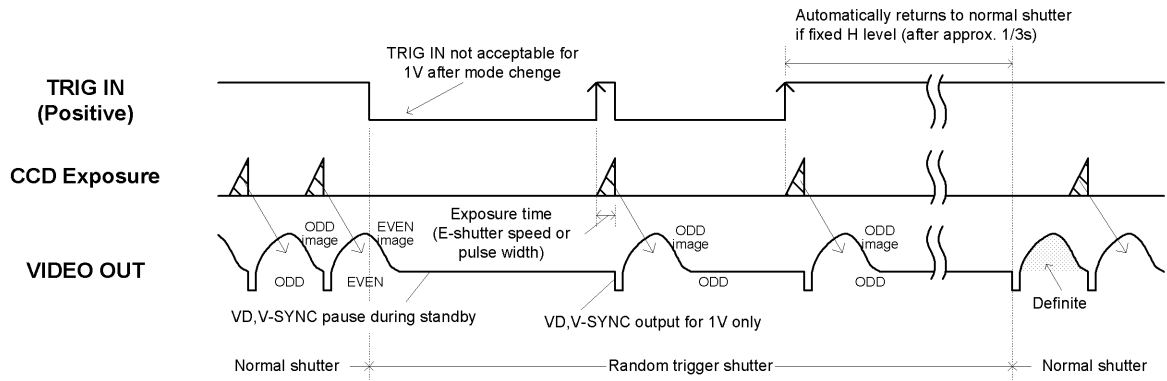

Exposure starts at the timing of TRIG signal IN. After each exposure is completed, the camera outputs video immediately by resetting VD. (HD is not reset)

□ 1/30s Non-interlace

□ 1/60s 2:1 Interlace

Irrespective of TRIG IN phase, the camera always outputs ODD field image.

(d) SYNC reset mode (Under internal sync)

Exposure starts at TRIG signal input timing, resets HD, and outputs video immediately after exposure by resetting VD.

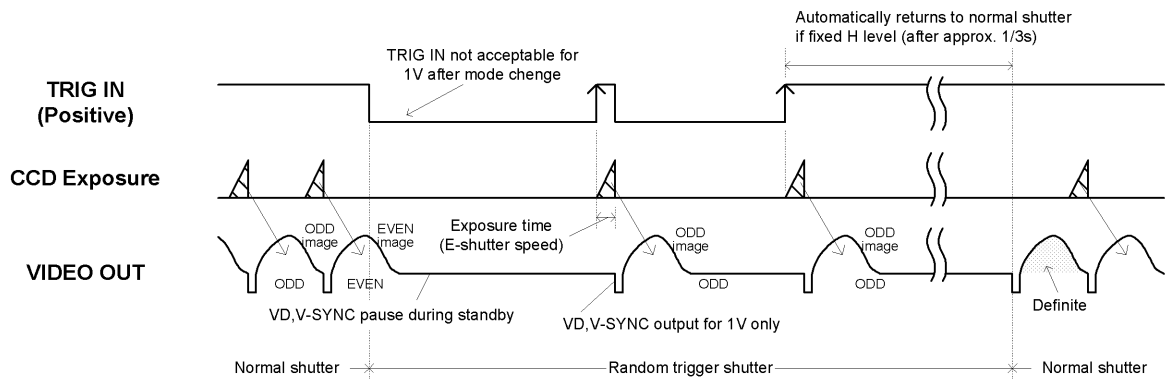

\* Available under FIX mode only.

□ 1/30s Non-interlace

□ 1/60s 2:1 Interlace

Irrespective of TRIG IN phase, the camera always outputs ODD field image.

### (5-3) MULTIPLE SHUTTER mode

Multiple shutter operation is available by providing TRIG IN more than one time before ext. VD IN. (Non-reset mode, single VD, consecutive VD IN)

#### 1/30s Non-interlace

#### 1/60s 2:1 Interlace

Video output field (ODD/EVEN) is determined by ext. VD falling edge and ext. HD phase.

■ RTS TRIG IN notes

1/30s Non-interlace

1/60s Interlace ODD Field

1/60s Interlace EVEN Field

- \* TRIG becomes invalid even if TRIG (exposure start) is inputted during TRIG invalid period.
- \* An image may be affected if TRIG (exposure start) is inputted during the video output time.
- \* An image may not be outputted normally if exposure is terminated during the video output time.

■ Exposure time delay under RTS

When the RTS is active, both in FIX mode and PULSE W mode, there is a time delay of approximately 2.5 micro s until the start of exposure after the rising edge of TRIG signal (positive).

■ Exposure time under pulse width mode

Under RTS pulse mode, the exposure time is determined by the pulse width. More exactly, the actual time is the pulse width plus approximately 16.0 micro s.

#### (5-4) Restart / Reset

The restart / reset function is available with the ext.VD signal. You can get an arbitrary slower shutter speed than normal shutter and random trigger shutter.

Here are some notes;

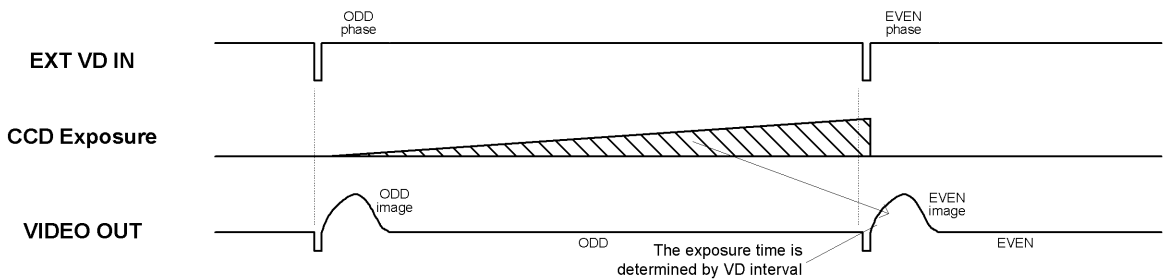

- \* The shutter speed (exposure time) is determined by ext. VD signal interval.
- \*\* This function is enabled when the rear-panel shutter speed DIP SW is OFF.
- \*\*\* Supply consecutive HD.

##### 1/30s Non-interlace

##### 1/60s 2:1 Interlace

Video output field (ODD/EVEN) is determined by ext. VD falling edge and ext. HD phase.

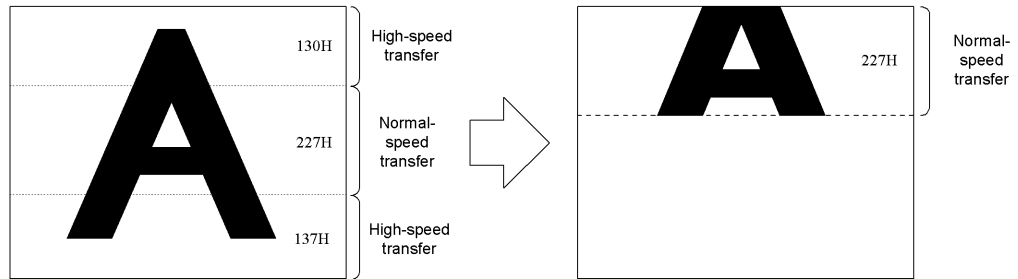

(6) Partial-scan mode selection (Camera rear-panel DIP SW)  
Switches partial-scan mode

Note: Sometimes phenomenon called as “whiteout” occurs at the top of the screen when there is strong incident light entering in the wide area of a CCD, however, this is not a malfunction. If this occurs, reduce the amount of incoming rays.

(6-1) 1/2 Partial-scan (Rear-panel SW: #7-OFF, #8-ON) --- Screen center 1/2 readout

1/30s Non-interlace

Under 1/30s non-interlace mode, only the center portion of 227H out of the total effective lines 494H (excluding BLK time) is read out. Available both under external / internal mode.

■ Under normal shutter (Electronic shutter OFF)

Notes: \* Under ext. sync, the ext. VD should be 1V = 262H.

\*\* Under normal shutter, set the rear-panel DIP SW #5, #6 in OFF.

■ Under other shutter modes

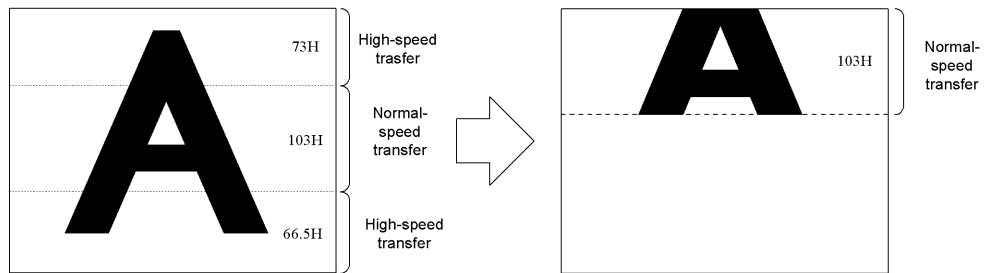

\*1: Arbitrary under ext.sync

□ 1/60s 2:1 Interlace

Under 1/60s interlace mode, only the center portion of 207H out of the total effective lines 485H (excluding BLK time) is read out. Available both under external / internal mode.

ODD Field

EVEN Field

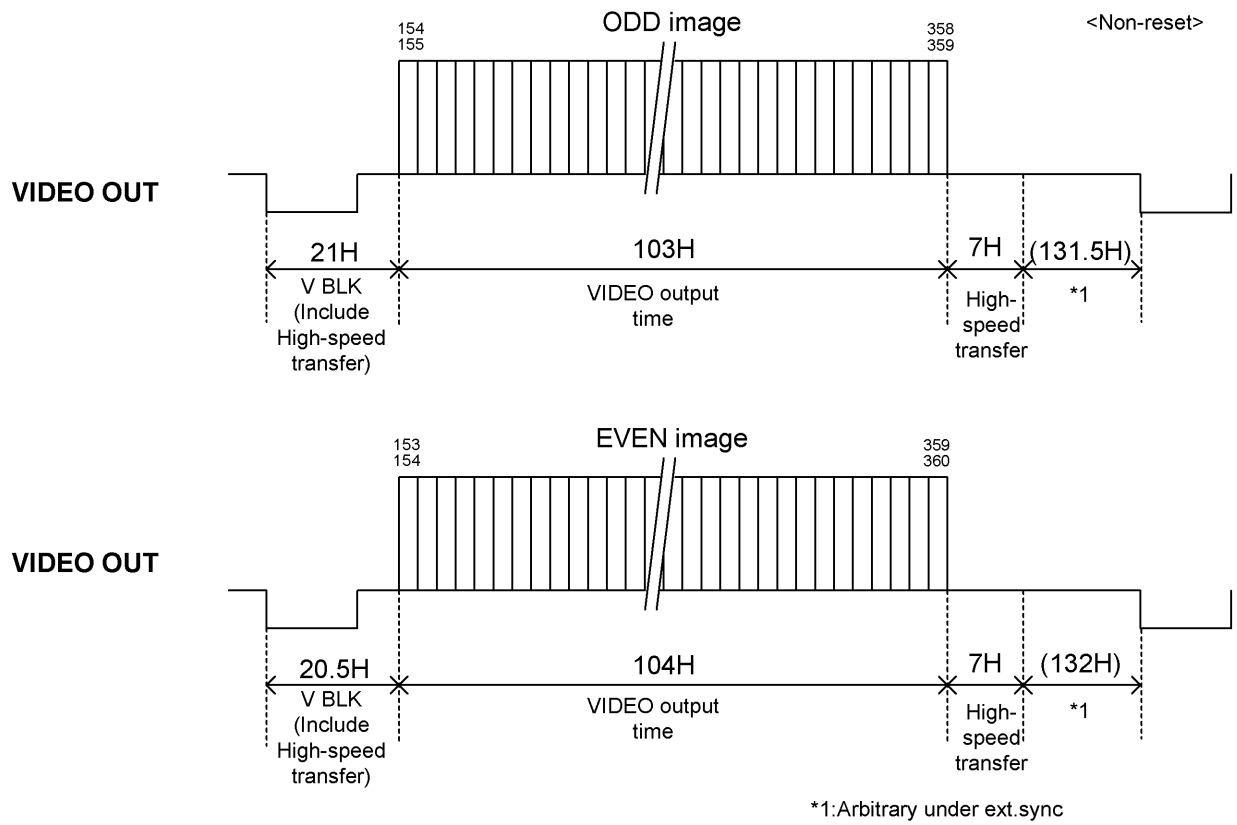

■ Under normal shutter (Electronic shutter OFF)

Notes: \* Under ext. sync, the ext. VD should be  $1V = 131.5H$ .

\*\* Under normal shutter, set the rear-panel DIP SW #5, #6 in OFF.

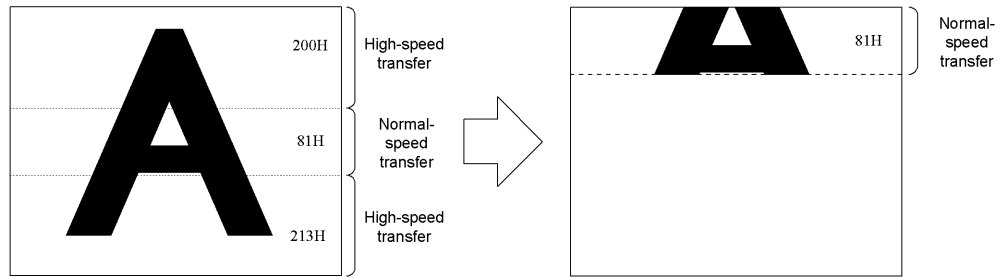

■ Under other shutter modes

(6-2)1/4 Partial-scan (Rear-panel SW: #7-ON, #8-ON) --- Screen center 1/4 readout

□ 1/30s Non-interlace
