RESTRICTION FOR USE

• Should the equipment be used in the following conditions or environments, give consideration to safety measures and inform us of such usage:
  1. Use of the equipment in the conditions or environment contrary to those specified, or use outdoors.
  2. Use of the equipment in applications expected to cause potential hazard to people or property, which require special safety measures to be adopted.

• This product can be used under diverse operating conditions. Determination of applicability of equipment or devices concerned shall be determined after analysis or testing as necessary by the designer of such equipment or devices, or personnel related to the specifications. Such designer or personnel shall assure the performance and safety of the equipment or devices.

• This product is not designed or manufactured to be used for control of equipment directly concerned with human life (*1) or equipment relating to maintenance of public services/functions involving factors of safety (*2). Therefore, the product shall not be used for such applications.

(*1): Equipment directly concerned with human life refers to.
  - Medical equipment such as life-support systems, equipment for operating theaters.
  - Exhaust control equipment for exhaust gases such as toxic fumes or smoke.
  - Equipment mandatory to be installed by various laws and regulations such as the Fire Act or Building Standard Law
  - Equipment related to the above

(*2): Equipment relating to maintenance of public services/functions involving factors of safety refers to.
  - Traffic control systems for air transportation, railways, roads, or marine transportation
  - Equipment for nuclear power generation
  - Equipment related to the above
CASES FOR INDEMNITY (LIMITED WARRANTY)

We disclaim any responsibility and shall be held harmless for any damages or losses incurred by the user in any of the following cases:

- Natural disasters, such as an earthquake and thunder, fire or any other act of God; acts by third parties; misuse by the user, whether intentional or accidental; use under extreme operating conditions.
- Malfunction or non-function resulting in indirect, additional or consequential damages, including but not limited to loss of expected income and suspension of business activities.
- Incorrect use not in compliance with instructions in this instruction specifications, manual and “ATTENTION FOR SAFETY”.
- Damage which arose by the operation method except writing in specifications or a manual.
- Malfunctions resulting from misconnection to other equipment or combination which is not meant with software etc.
- Repairs or modifications made by the user or caused to be made by the user and carried out by an unauthorized third party.
- Notwithstanding the foregoing, Teli’s liabilities shall not, in any circumstances, exceed the purchase price of the product.
- About the item which does not have a publication in the specifications and manual of this product, it considers as the outside for a guarantee.
- The attachment mistake of a cable.
• **Handle carefully**
  Do not drop the equipment or allow it to be subject to strong impact or vibration, as such action may cause malfunctions. Further, do not damage the connection cable, since this may cause wire breakage.

• **Environmental operating conditions**
  Do not use the product in locations where the ambient temperature or humidity exceeds the specifications. Otherwise, image quality may be degraded or internal components may be adversely affected. In particular, do not use the product in areas exposed to direct sunlight. Moreover, during shooting under high temperatures, vertical stripes or white spots (noise) may be produced, depending on the subject or camera conditions (such as increased gain). However, such phenomena are not malfunctions.

• **Combination of C-mount lens**
  Depending on the lens you use, the performance of the camera may not be brought out fully due to the deterioration in resolution and brightness in the peripheral area, occurrence of a ghost, aberration and others. When you check the combination between the lens and camera, be sure to use the lens you actually use.
  When installing a lens in the camera, make sure carefully that it is not tilted.
  In addition, use a mounting screw free from defects and dirt. Otherwise, the camera may be unable to be removed.
  As for the C-mount lens used combining this product, the projection distance from bottom of the screw should use 10mm or less.

![Diagram of C-mount lens and mounting screw](image)

• **Do not shoot under intense light**
  Avoid intense light such as spot lights on part of the screen because it may cause blooming or smears. If intense light falls on the screen, vertical stripes may appear on the screen, but this is not a malfunction.

• **Do not expose the camera's image-pickup-plane to sunlight or other intense light directly**
  Its inner CCD (charge-coupled device) might be damaged.
**USAGE PRECAUTIONS**

- **Occurrence of moiré**
  If you shoot thin stripe patterns, moiré patterns (interference fringes) may appear. This is not a malfunction.

- **Occurrence of noise on the screen**
  If an intense magnetic or electromagnetic field is generated near the camera or connection cable, noise may be generated on the screen. If this occurs, move the camera or the cable.

- **Handling of the protective cap**
  If the camera is not in use, attach the lens cap to the camera to protect the image pickup surface.

- **If the equipment is not to be used for a long duration**
  Turn off power to the camera for safety.

- **Maintenance**
  Turn off power to the equipment and wipe it with a dry cloth.
  If it becomes severely contaminated, gently wipe the affected areas with a soft cloth dampened with diluted neutral detergent. Never use alcohol, benzene, thinner, or other chemicals because such chemicals may damage or discolor the paint and indications.
  If the image pickup surface becomes dusty, contaminated, or scratched, consult your sales representative.

- **Disposal**
  When disposing of the camera, it may be necessary to disassemble it into separate parts, in accordance with the laws and regulations of your country and/or municipality concerning environmental contamination.
  This product is marked this symbol to subject to EU Waste Electrical & Electronic Equipment (WEEE) directive.

---

**Following information is only for EU-member states:**

The use of the symbol indicates that this product may not be treated as household waste. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate waste handling of this product. For more detailed information about the take-back and recycling of this product, please contact your supplier where you purchased the product.

---

“This symbol is applicable for EU member states only”
1 Overview

This BG B/W series is an integrated-(one-body)-type monochrome camera that adopts all pixel data readout inter line CCD. There are 4 models according to the sensor type. These are BG030 (VGA 1/3 type), BG031 (VGA 1/2 type), BG080 (XGA), BG130 (SXGA). For video output and camera control, the Gigabit Ethernet®* interface standard "IEEE802.3ab" is adopted for high transfer rate, and it is easy to integrate into industrial equipment.

* Ethernet® is a registered trademark of XEROX Corporation.

2 Feature

2.1 High frame rate and high resolution

Supported high frame rate BG030 (125fps/VGA), BG031 (125fps/VGA), BG080 (40fps/XGA), BG130 (30fps/SXGA).

2.2 All pixel readout

All pixel signals (in the effective area) are output in one frame processing.

2.3 Full frame shutter

Since all pixels are output even in Random Trigger Shutter operation, high resolution can be achieved, without deteriorating the vertical resolution.

2.4 Square grids

The CCD pixels arrayed in square grids facilitates computation for image processing.

2.5 Gigabit Ethernet interface (Power over Ethernet)

Video output and camera control are performed via the Gigabit Ethernet standard IEEE802.3ab interface. Data transfer is up to 1Gbps (Maximum) that enables to output uncompressed video data at high frame rate. By complying with IEEE802.3af Power over Ethernet (PoE), the power is supplied over single cable.

2.6 GigEVision Ver 1.2 conformity

This product is based on GigEVision Camera Interface Standard for Machine Vision Ver 1.2.
2.7 GenICam Ver 2.3 conformity
This product is based on GenICam Generic Interface for Cameras Ver 2.3.

2.8 Binning mode
This mode achieves high frame rate by adding two vertical lines or four vertical lines.

2.9 Random Trigger Shutter
The Random Trigger Shutter function provides images in any timing by input of an external trigger signal. Trigger control from PC is available as well.

2.10 Scalable
Selectable video output area. This mode achieves higher frame rate by reducing vertical output area. And reduces occupied data rate of Gigabit Ethernet by reducing horizontal output area.

2.11 Compact and lightweight
This camera is compact and lightweight; it is easy to integrate into industrial equipment.

2.12 EU RoHS & Chinese ROHS

### 3 Configuration

3.1 Camera body  1
* No application software and manuals are attached to this camera.

### 4 Optional part

- Camera mounting kit  Model name: CPT8600
- Camera Cable  CPCBG-xx
* Contact your dealer / distributor for details of option units.
5 Functions

5.1 Gain
Manual gain and automatic gain control (AGC) are available. In AGC mode, camera gain is automatically adjusted to suit subject brightness.

Notes on gain setting:
Setting the gain value too high increases noises. When you adjust the brightness of the image, I ask you to have final image quality checked with your environment.

5.2 Black Level
Black level is adjustable from -5% to +25% as white saturation level is 100%.

5.3 Gamma
Gamma correction curve is adjustable from 0.45 to 1.00.

5.4 LUT (Look Up Table)
Arbitrary curve and binarization are possible by using 10 bit input and 10 bit output LUT.

5.5 Packet Resend
GigEVision Packet Resend feature is supported.

5.6 Exposure Time
Automatic exposure time control (AE) and manual exposure time (MANUAL) are available.

5.6.1 AE
The exposure time is adjusted automatically to suit subject brightness. This mode can also operate with AGC (Automatic Gain Control) to automatically adjust fluctuations in subject brightness across a wide range (ALC operation).

5.6.2 MANUAL
Exposure time is adjustable by micro-second unit.
5.7 Random Trigger Shutter

An image is captured at the desired timing using trigger signal input. External trigger signal from trigger input connector and software trigger from control command are available. Trigger polarity is selectable (High active / Low active).

Note that Random Trigger Shutter will cause a delay between trigger signal and start of exposure. See 7. Timing Chart for detail.

- Timed mode The exposure time is determined by Exposure Time setting.
- TriggerWidth mode The exposure time is determined by the pulse width of the trigger signal.

**Notes on long exposure:**
When you set the exposure time longer than approximately 1 second, white spots and the unevenness in highlight portion might occasionally be observed on screen. This phenomenon is due to the characteristics of the CCD device. It's not a malfunction of the camera itself.

**Notes on Random Trigger Shutter mode:**
- In the period when FRAME_TRIGGER_WAIT signal is inactive, user must not input external trigger signal to this camera.
- When the interval of the input trigger signal is extremely short, or when the trigger signal is noisy, there is a possibility of causing the malfunction. In this case, please input a proper trigger signal.

5.8 Trigger Delay

You can add the delay between trigger signal input and the start of exposure.
5.9 GPIO

Selected signals are output from GPIO pins of I/O connector. Following signals are selectable.

- **VD** : Internal VD sync signal.
- **TIMER0 ACTIVE** : This signal can be used as strobe control signal. The delay time and pulse width of this signal are configurable.
- **EXPOSURE ACTIVE** : Period from exposure start to end.
- **FRAME ACTIVE** : Period from exposure start to CCD transfer completion.
- **FRAME TRANSFER** : Period of Ethernet packet transfer.
- **FRAME TRIGGER WAIT** : Indicating waiting a Random Trigger Shutter. An External trigger is input during this period, exposure starts immediately.

*GPIO:default=Active Low*
5.10 Scalable mode

Scalable mode is to read out arbitrary area of the image. Only single rectangle is selectable. Concave or convex shape is not selectable.

- Window size: \( \{A \times m \ (H)\} \times \{B \times n \ (V)\} \)
  
  \( A, B = \) minimum unit size
  
  \( m, n = \) integer

  The window size is equal or less than maximum image size.

- Start address: \( \{32 \times i \ (H)\} \times \{24 \times j \ (V)\} \)
  
  \( i, j = \) integer

  The window size is equal or less than maximum image size.

<table>
<thead>
<tr>
<th>Model</th>
<th>BG030</th>
<th>BG031</th>
<th>BG080</th>
<th>BG130</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum unit size ((H) \times (V))</td>
<td>160 x 120</td>
<td>160 x 120</td>
<td>256 x 192</td>
<td>160 x 120</td>
</tr>
<tr>
<td>Maximum unit size ((H) \times (V))</td>
<td>640 x 480</td>
<td>640 x 480</td>
<td>1024 x 768</td>
<td>1280 x 960</td>
</tr>
</tbody>
</table>

In the scalable mode, camera reads out only necessary area at the normal speed and reads out other area at high speed. The frame rate can be faster when the vertical height size is small. However, the frame rate cannot be faster only when the horizontal width size is small, due to the operation mechanism of the CCD sensor.

**Notes on scalable mode:**

White lines may occur in the upper portions of the screen when strong light exists in a wide area during the scalable mode. This is not a malfunction. If white lines occur, adjust the amount of incident light using the lens.
5.11 Binning Mode
In the binning mode, pixel data is combined by vertical and horizontal.
* Binning mode and Scalable mode can not operate at the same time.

<table>

5.12 User Free Memory
A memory area is provided for reading and writing data as desired by the user. Individual numbers can be assigned when multiple BG cameras are connected.

5.13 Test Pattern
Following test patterns are available
- Black : Full screen 0 LSB (@ 8-bit)
- White : All pixels 255 LSB (@ 8-bit)
- Bright Gray : Full screen 85 LSB (01010101B) (@ 8-bit)
- Dark Gray : Full screen 170 LSB (10101010B) (@ 8-bit)
- Ramp waveform

### Notes on Dropping Frames:

Depends on your PC or Gigabit Ethernet interface board configurations, images may not be captured properly (e.g. dropping frames). In this case, change to frame rate setting lower.

### Notes on Heat Radiation:

The temperature of camera housing must be kept less than 50 °C.
Please provide sufficient heat radiation depending on your installation.

### Notes on Conformity of the EMC:

The adaptability of the safety standard of this camera is assured in the condition of combination with the following parts:

- **PoE operation**
  - PoE Switch GS108P-100AJS (NETGEAR Inc.)
  - LAN Cable C5e(S-HFR)(K)-* (Oki Electric Cable Co., Ltd.)

- **DC operation**
  - DC Cable CPCBG-03
  - LAN Cable C5e(S-HFR)(K)-* (Oki Electric Cable Co., Ltd.)

Please confirm the EMC adaptability when it combines with parts other than them.

**Notes on Power Supply:**

This camera has two ways of power supply,
- Supply from LAN cable (PoE)
- Supply from camera cable (DC+12V ±10%)

If both PoE and DC+12V are connected, power is supplied from PoE.
6.11 Typical spectral response
The lens characteristics and light source characteristics is not reflected in table.

< BG030 >

< BG031 >
7 Timing chart

Image data outputs are transferred with the UDP protocol of Gigabit Ethernet. Timing numerical value below is described by absolute prerequisite that camera can use transmission band without restriction of other node. When there is other node using the same network, the value described below is not guaranteed.

7.1 In Normal shutter mode

Video format: MONO 8, all pixel readout

![Image diagram]

<table>

<td></td>
<td></td>
<td>33.3</td>
</tr>
</tbody>
</table>

* TDLY1 : GVSP_BLOCK_START_DELAY
* TDLY2 : SCPD (Stream Channel Packet Delay)

\[ T1 = \frac{T2 \times \text{PayloadSize}}{\text{SCPS} - 36} \times 3, \ T1 = 100\mu s \text{ or longer.} \]

PayloadSize is total bytes of single frame.
The formula applies when SCPS (Stream Channel Packet Size) is 1500 byte / packet.
(T1 varies depending on the value of SCPS)
7.2 In Random Trigger Shutter mode

7.2.1 Timed mode (Video format: MONO 8, all pixel readout)

7.2.2 TriggerWidth mode (Video format: MONO 8, all pixel readout)

<table>
<thead>
<tr>

<td>7.1</td>
</tr>
</tbody>
</table>

* The value of T1 and T2 are the same as the value of normal shutter mode.
* T3 and T4 are typical value.

Notes on Random Trigger Shutter mode:
- In the period when FRAME_TRIGGER_WAIT signal is inactive, user must not input external trigger signal to this camera.
- When the interval of the input trigger signal is extremely short, or when the trigger signal is noisy, there is a possibility of causing the malfunction. In this case, please input a proper trigger signal.
7.2.3 About external trigger signal input

The specifications of external trigger input signal are as follows;

- Trigger amplitude : +3.3 to +24V
- Pulse width      : Minimum 200µs

The received external trigger signal delays.

![Diagram of external trigger signal input](attachment:image.png)

**EXT_TRIG**

**TRIG_IN** (internal signal)

(a) Negative trigger

(b) Positive trigger

**EXT_TRIG_WIDTH**: The pulse width of the external trigger input (more than 200µs).
**Toff**: The delay time of falling edge.
**Ton**: The delay time of rising edge.

**TRIG_IN_WIDTH**: The pulse width of the trigger signal which is received inside of the camera.

- Negative trigger: TRIG_IN_WIDTH = EXT_TRIG_WIDTH - (Ton - Toff)
- Positive trigger: TRIG_IN_WIDTH = EXT_TRIG_WIDTH + (Ton - Toff)

<table>
<thead>
<tr>
<th>Trigger amplitude</th>
<th>Toff [µs]</th>
<th>Ton [µs]</th>
</tr>
</thead>
<tbody>
<tr>
<td>+3.3V</td>
<td>2.92</td>

<tr>
<td>+12V</td>
<td>4</td>
<td>78.4</td>
</tr>
<tr>
<td>+24V</td>
<td>5</td>
<td>94.4</td>
</tr>
</tbody>
</table>

* Toff and Ton are typical value.
* These values vary depending on operating environment.
8 Warranty rules

8.1 Warranty term

Warranty term is 36 months after your purchase. We may assume the date of the purchase from our shipping date when the date is unidentified.

8.2 Limited Warranty

Free warranty is not applicable for the troubles, damages or losses caused by the cases of the followings, even if it is during the warranty term.

1. Natural exhaust, wear or degradation of a component parts
2. Handling against the instructions and conditions described in the instruction manual
3. Remodeling, adjustment and the part exchange. (including the opening of the enclosure box and the alteration)
4. Using the accessories not included with the product or our non-designated optional articles
5. Damages caused during the transportation or deficiency of the handling such as drop or fall of the products after the products having been transferred to customers, leaving the products to corrosive environment such as sunlight, fire, sand, soil, heat, moisture, or an inappropriate storing method
6. A fire, an earthquake, a flood, a lightning, or other natural disasters, pollution and a short circuit, abnormal voltage, excessive physical pressure, theft, other accident
7. When connected to a product which is not recommended
8. When connected to the power supply which is not suitable
9. Forgery product, products which does not have proper serial number, products of which serial number is forged, damaged or deleted
10. All defects that happened after the expiration for a warranty term
9 Repair

9.1 Repair Methods
Exchange to a replacement or an equal function product.

9.2 Repair request methods
On the occasion of a repair request, please return the defective product with the failure situation report sheet to be filled out.
Please read the following instructions carefully.

1. Please return our product alone, taking out of your equipment in case that our product is installed to an equipment
2. We are unable to return the information such as your own serial numbers, control number, the identification seal, if it is attached to the returned products. Please keep record before you return the product.
3. As the data saved in the camera will not be kept after the repair, please take out data before return.
4. We are unable to accept the cancellation after the repair request by the customer's reason.
5. About the repair product shipping expenses, please bear the charges when you return the product to us. We bear the charges to you from us only for a warranty period.
6. We are unable to accept your request of a delivery date and time of the product return, or the delivery method.
7. We are unable to accept a trouble factor investigation, the request of the repair report.
8. We accept a repair of out of warranty product, if it is reparable.
9. The proprietary rights of the repair request products after the exchange repair belong to us.
10. The immunity from responsibility of the product is applied in the repair completion products.

* Please refer for the inquiry about the software to our homepage or sales personnel.
10 Outline Drawing

[Unit: mm]
In order to grasp the details of failure, please fill out the following information, and send us the defective product with this report sheet enclosed.

(1) Customer information

<table>
<thead>
<tr>
<th>Company Name</th>
<th>Department</th>
<th>Your Name</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Telephone number</th>
<th>E-Mail address</th>
<th>FAX number</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Postal code number</th>
<th>Address</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(2) Return address

Please fill out this information, if the return address is different from above address (1).

(3) We suggest a possible solution before your repair request.

Please ensure your safety when you check following items.
Please handle power supply with proper procedure, and make sure it does not impede any operation.

a) Restart the power supply of this product. Check → □ Tried □ Not Tried
   Please turn off this product once, switch on a power supply again after passing for a while, and confirm operation.

b) Exchange for other products. Check → □ Tried □ Not Tried
   Please exchange for other same products, and confirm operation.

c) Connect to other PC systems. Check → □ Tried □ Not Tried
   Please connect this product to other PCs, and confirm operation.

d) Check Specifications of this product. Check → □ Tried □ Not Tried
   Please confirm that specifications of this product conform to usage environment refering to following URL.
   URL: http://www.toshiba-teli.co.jp/index.htm
   Please check our website for the latest information.

(4) Failure situation

<table>
<thead>
<tr>
<th>Model name</th>
<th>Serial No.</th>
<th>Your dealer</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Purchase date</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

Failure condition: (Please fill out the phenomenon in detail.)

(5) From when

□ Unknown □ From the beginning □ After a while
( □ Others ____________________________ )

(6) Occurrence frequency

□ Unknown □ It certainly occurs. □ It sometimes occurs.
□ It occurs, after time passes.
( □ Others ____________________________ )
