

2016 International Technical Exhibition Seminar

## Why USB3.0?

 Robust of USB3.0 & Innovative Technology of Toshiba Teli Co.

Date: Thursday, Dec. 8th 2016

Time: 12:10 - 13:00

Place: Seminar Room, Pacifico Yokohama

### **TOSHIBA TELI CORPORATION**

### Requirement about this document

- This document contains technical information which Toshiba Teli Co. is working on
- Product information in this document are on plan without any commitment for marketability. And, specifications under development are subject to change without prior notice. Please contact our sales staff for the latest information.
- Unauthorized duplication, disclosure, second use, reprint and reuse of this document are not allowed.

\* Some of the names and logos of company, organization, standard might be registered trade mark of each.

### Agenda

- Robustness of USB3 Vision
- Teli's unique technology for robust enhancement
- Examples of solution

### **Robustness of USB3 Vison**

4

### What's Robustness?

What is Robustness?

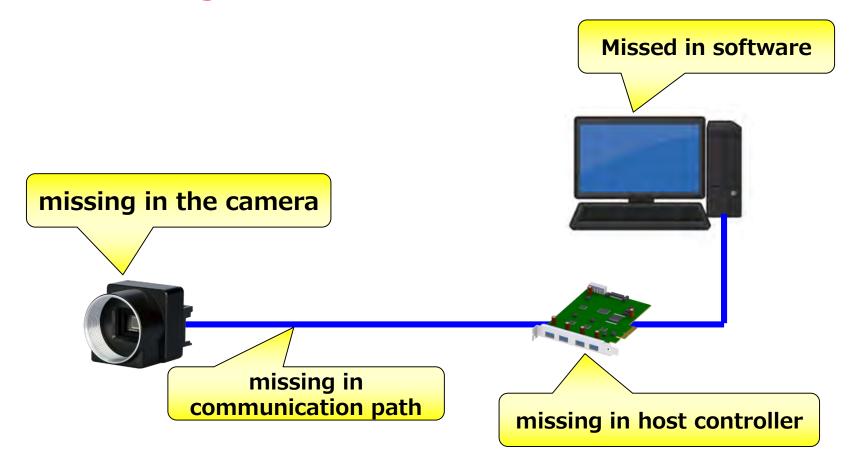

- Strength
- Stability, Solid

What is very robust camera?

 To get desired image surely in desired timing

### Robustness of Camera

What factor decides robustness of camera?
Where image data is missed?

### Missing in the camera

Depending on interface spec., camera buffer capacity

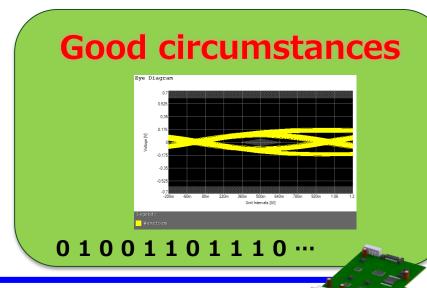

### Missing in communication path

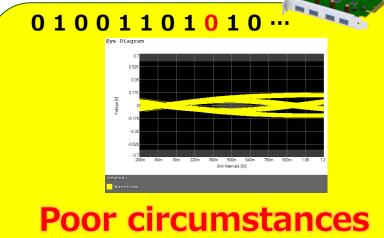

01001101110...

noise, attenuation

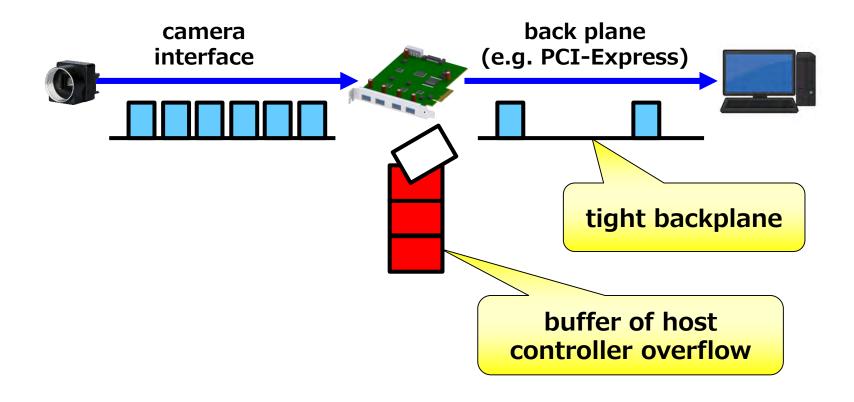

**Depending on** interface spec., cable quality

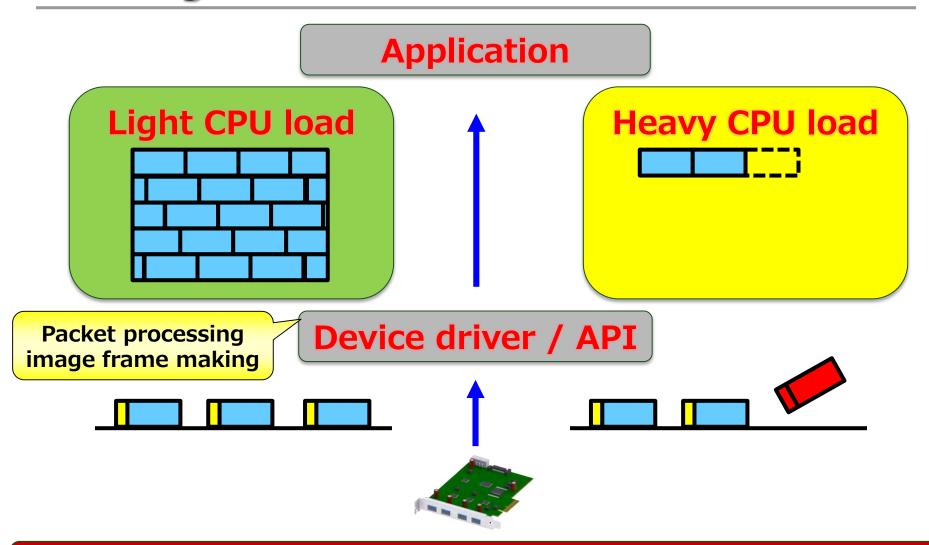

2016/12/08

### Missing in host controller

Depending on interface spec., host controller buffer capacity

### Missing in software

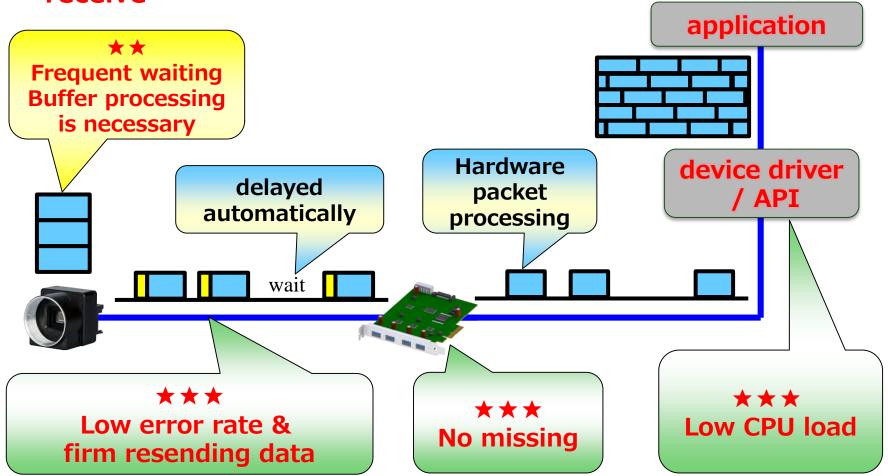

Depending on Packet processing contents, CPU load

### What's robustness of USB3 Vision

In case of USB, host controller manages all sending timing

host controller sends only in case opponent is ready to receive

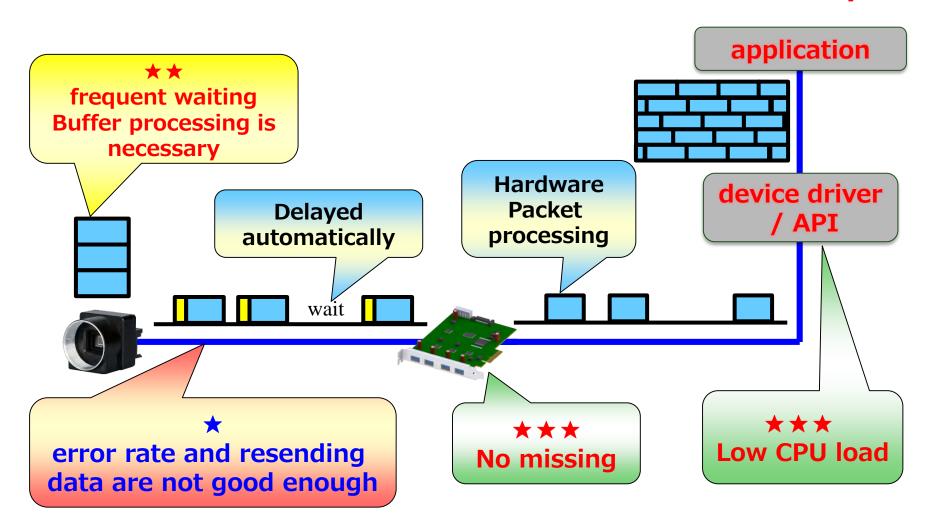

### Comparison with various interface

- USB2.0
- GigE Vision
- Camera Link

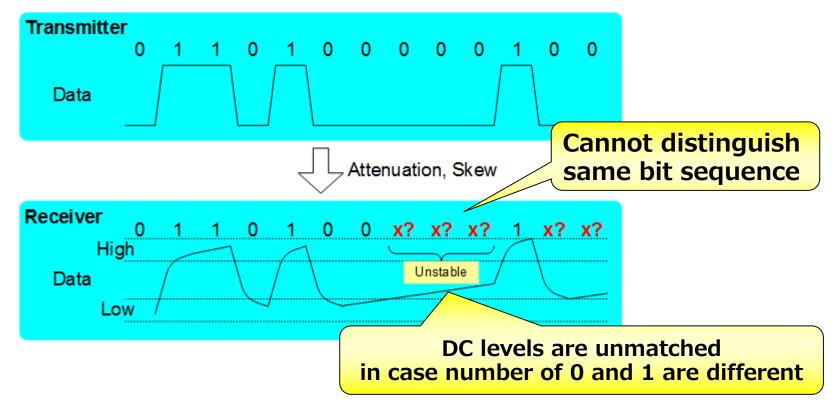

### What's robustness of USB2.0?

USB2.0 has low robustness in communication path

### Comparison with USB2.0

### Error rate issue

**USB2.0** has

max 6 sequence of same bit

no DC balance compensation

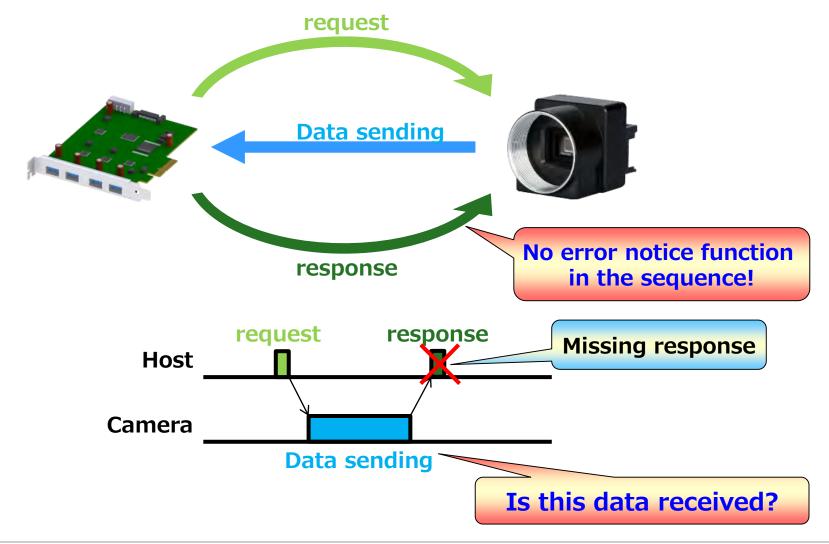

USB3.0 has max. 4

USB3.0 has compensation

### Comparison with USB2.0

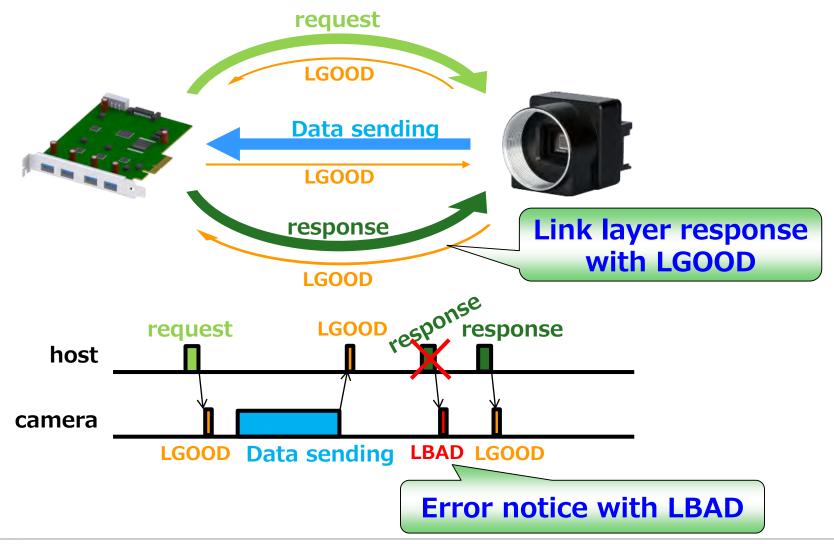

### Resending data issue

### Comparison with USB2.0

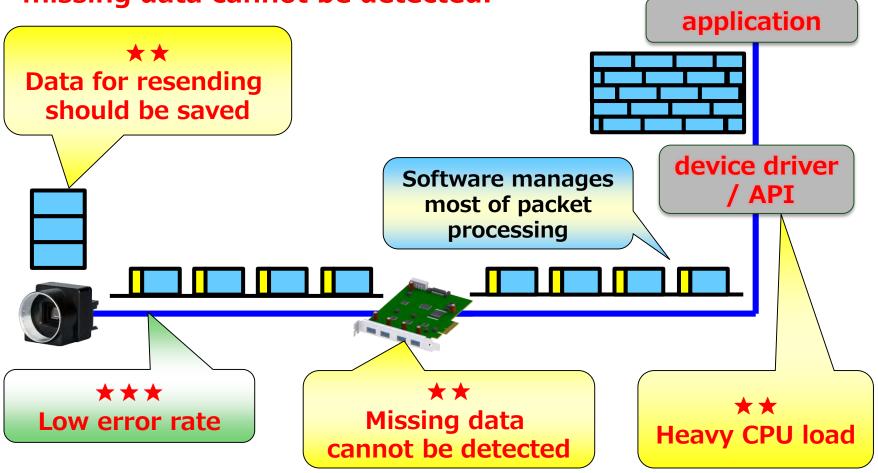

In case of USB3.0

## How about robustness of GigE Vision?

GigE Vision has high robustness in communication path

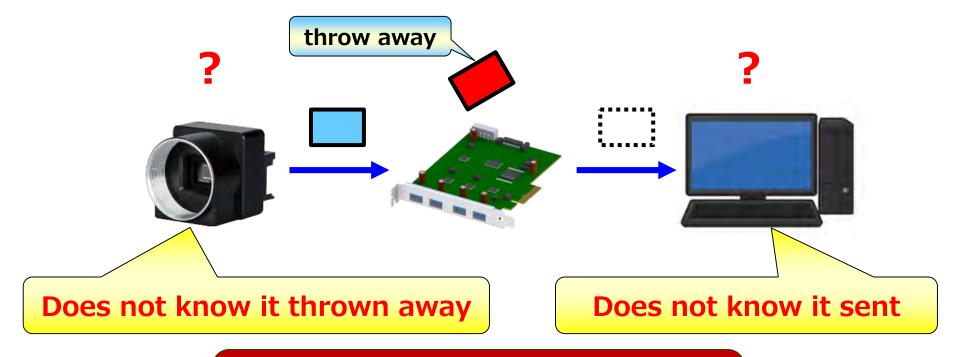

However, robustness varies depend on CPU load because missing data cannot be detected.

### Comparison with GigE Vision

GigE Vision (Ethernet) allows receiver to throw packet away

No notice to sender in this case

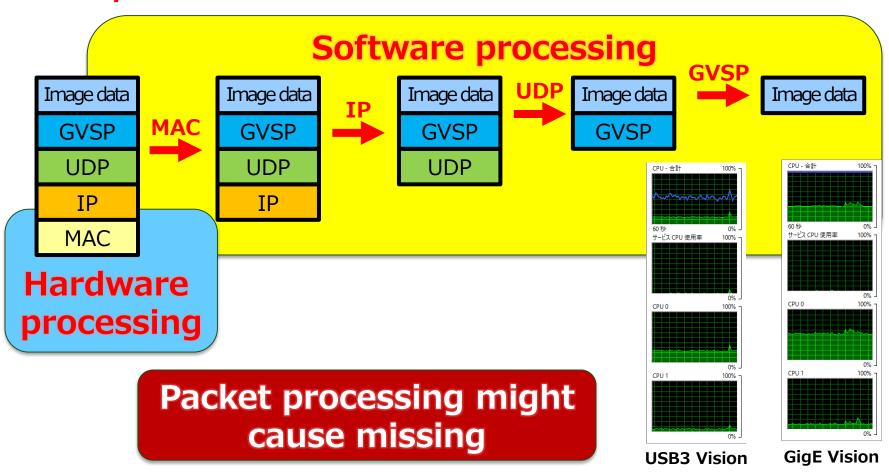

Missing packet is detected only by timeout

### Comparison with GigE Vision

 In case of GigE Vision (Ethernet), most of packet are processed by software

**Heavy CPU load** 

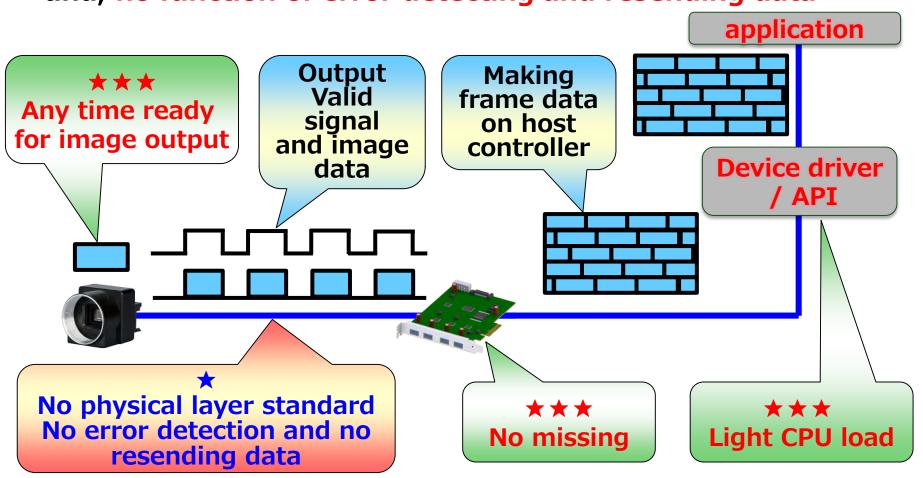

### What is robustness of Camera Link?

 In case of Camera Link, electric physical layer specifications are not standardized

and, no function of error detecting and resending data

2016/12/08

# Toshiba Teli's unique technology for robustness

### Enough robustness?

USB3.0 compliance test is cleared
Is that enough?

## What USB3.0 compliance test ensure is .....

- Secured recovery from error
- High connectivity without compatibility problem

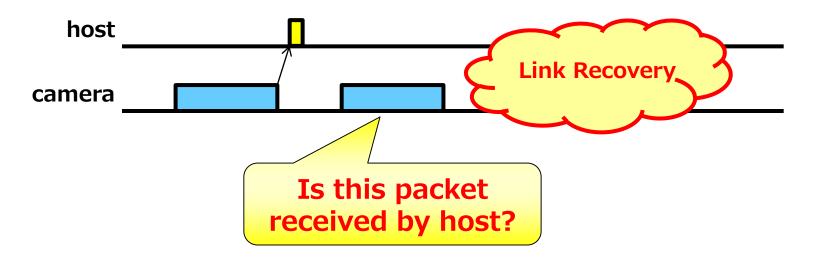

### Secured recovery from error

Recovered from error but …

Sending data when error is occurred are not secured depend on error cause!

It occurs with error recovery near physical layer (Link Recovery)

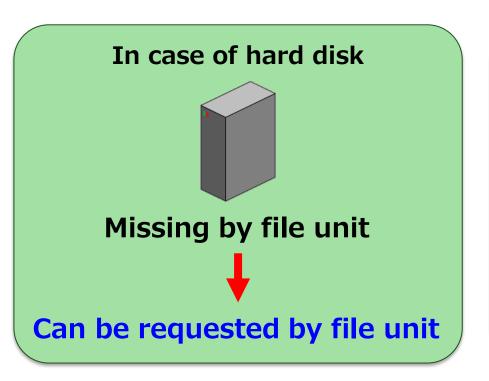

Error is caused including packet already sent

23

### Secured error recovery

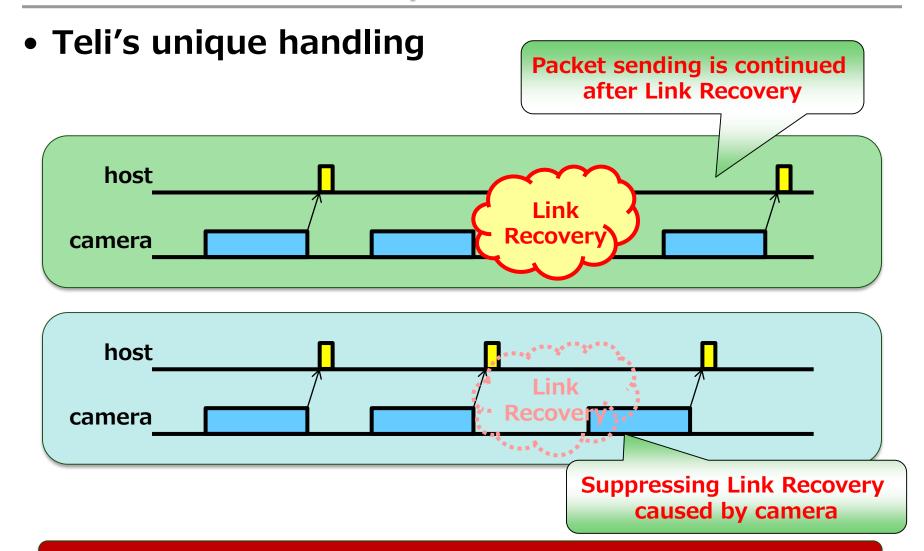

Error in a sequence of data sending …

Required operational conditions are severer than other USB3.0 equipment!

## Secured recovery from error

Unique handling according to USB3.0 standard

### Enough robustness?

Enough robustness of camera
Why camera robustness is enough?

**Anything concerns USB3.0 connection affects!** 

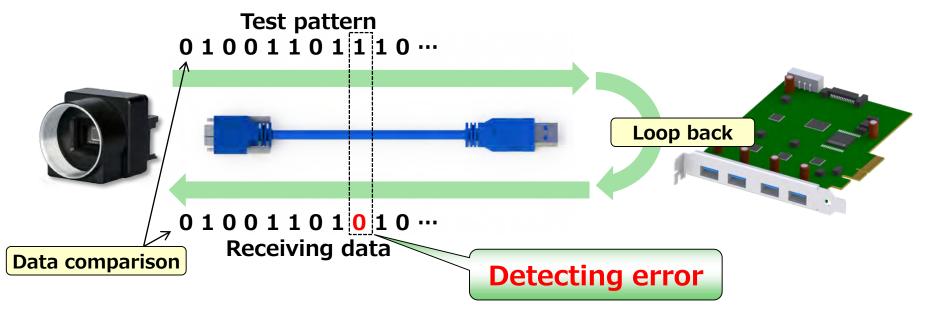

26

### Enough robustness?

 How to check robustness of factors other than camera?

BERT (Bit Error Rate Test) function can be used

\* CMOS model only

Verifying actively robustness of USB3.0 connection!

## Solution examples

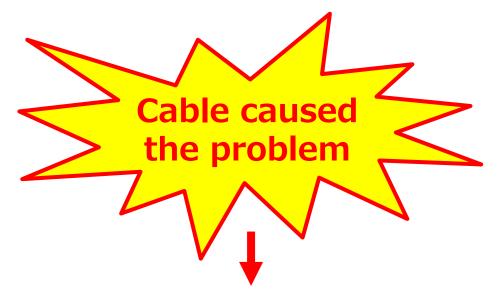

### Solution example -1

Semiconductor manufacturing equipment

Bonder, AOI – Use :

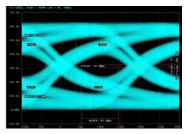

- Camera: BU406M, BU406MC

Image is stopped

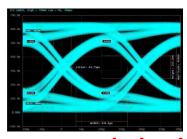

**Solution by replacing cable** with our recommended one

**NG** cable

**Recommended cable** 

## Solution example -2

### Medical equipment

- Use: Biopsy

- Camera: BU130

Connected as USB2.0

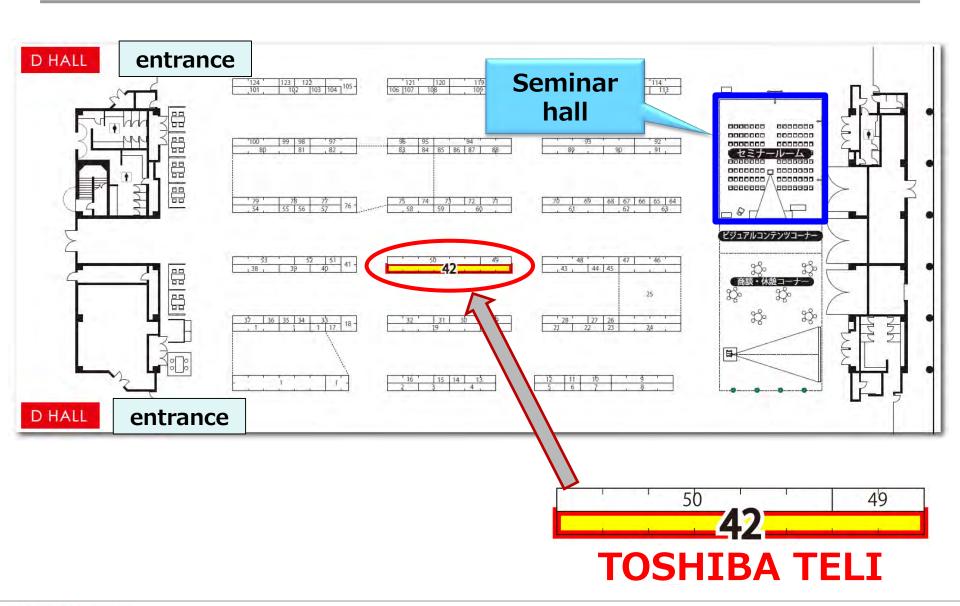

Solution by setting change of host

# Introduction of Toshiba Teli's exhibition booth

### Introduction of Toshiba Teli Exhibition booth

### **Exhibiting Contents**

**■** Latest products info.

**■** Innovative technology

■ Partner's products

■ Exhibition & demo of solution

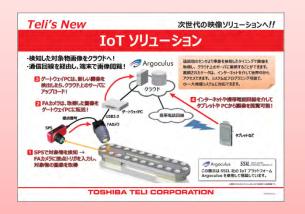

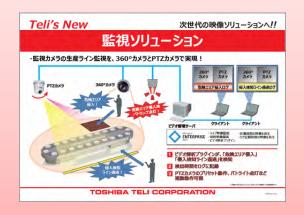

### **Exhibiting Contents**

#### ■ Integration of FA & Monitoring solution

■ Image processing library / demo

2016/12/08

Thank you for paying attention to our seminar today.

Please visit our booth. USB3.0 cameras are exhibited there.
